PROFILE

Fullstack developer (Python, React, Node.js, PHP/Laravel) with 1.5 years of professional experience, currently completing an MSc in Software Engineering (French RNCP Level 7 / EQF 7, Epitech). Comfortable from rebuilding business applications and migrating production databases through to low-level tooling: I co-develop CoreTrace, an open-source C/C++ static analyser built on LLVM/Clang. Seeking a systems, security or platform-oriented role.

TECHNICAL SKILLS

- Languages:** C, C++, Python, JavaScript, PHP, SQL
Frontend: React, Vue.js, Figma
Backend & Data: Node.js, Laravel, REST APIs, MySQL, Oracle
Systems & Low-level: LLVM / Clang, static analysis, SARIF, Linux
AI & LLM: llama.cpp, fine-tuning, on-premise deployment, MCP servers
Security: Burp Suite, Hydra, Chisel, offensive-defence CTF
DevOps & Cloud: Docker, AWS, DigitalOcean, GitHub Actions, CI/CD, Git, SSH

PROFESSIONAL EXPERIENCE

- Fullstack Developer — Python / React** | Groupe Caille, Réunion Island Apr 2025 – Aug 2025
- Rewrote an internal business application from WinDev to a Python / React stack, replacing an ageing proprietary codebase.
 - Led the production database migration from Oracle to MySQL, porting the data model, queries and existing processing logic.
 - Gathered requirements from the different user departments and redesigned the interface (UI/UX) accordingly.
 - Outcome: measurably improved application performance and usability [add a figure: load time, user count, screens rebuilt].
- Fullstack Developer — Node.js / React** | Regal Vanille, Réunion Island Sep 2024 – Feb 2025
- Built an e-commerce website end to end: Node.js backend, React frontend, MySQL database.
 - Hardened platform resilience on AWS cloud infrastructure, improving availability and uptime [add a figure: uptime %, traffic handled].
- Fullstack Developer — PHP Laravel / Vue.js / C++** | Département de La Réunion (DSID) Aug 2023 – Dec 2023
- Implemented a locally hosted LLM to serve staff needs, keeping all data on internal infrastructure.
 - Fine-tuned the model on domain data and designed the REST APIs enabling its integration with existing tools.
 - Built the supporting interfaces, self-teaching Vue.js in the process.

PROJECTS

- CoreTrace — C/C++ Static Analyser (open source)** | 2025 – Present
- Co-developing a static analysis tool for C and C++ built on LLVM / Clang 20, producing SARIF-formatted reports and exposing an MCP server for integration with AI coding agents. Owner of the GUI component. Released under Apache 2.0.
- Chisel — CTF Competition, Epitech** | Jun – Jul 2025
- Three-week internal offensive-defence Capture The Flag programme: identifying vulnerabilities, exploiting them, then proposing countermeasures. Finished in the top 10 participants by completion speed.
- Innov4Safe — Hackathon Winner, Préfecture de La Réunion** | Oct 2024
- Grand prize winner: designed a system that automatically reports local field data during cyclone periods for use by regional stakeholders.
- Local LLM Inference Lab** | 2025 – Present
- Deploying and optimising language models locally (llama.cpp, quantisation, VRAM trade-offs) to power autonomous coding agents.

EDUCATION

- Epitech — MSc in Computer Science, Software Engineering Expert (RNCP Level 7 / EQF 7)** Sep 2022 – Present
- Fifth year. Project-based curriculum with strong emphasis on teamwork and technical autonomy.
- Keimyung University, South Korea — Academic Exchange Year** Aug 2025 – Jun 2026
- Video game development. Fully English-taught curriculum. GPA: 3.9.

LANGUAGES

French — native · English — fluent (completed a full academic year taught in English)
